

ClassMic Evaluation Protocol and Review Form

Prepared for use during execution

Temiko Machavariani and Nurtore Arynuruly | BUS 2010 | 10 September 2026

Use this protocol after the prototype exists. It defines the selected acceptance method and blank records; it contains no test results. Nurtore coordinates reviewers and records outcomes. Temiko runs technical checks and fixes defects.

Measure	Method	Pass rule
Setup	Ten trials. Start when the tester receives the join instruction; stop when the correct session shows microphone-ready status. Record denied permission and other failures.	At least 9 of 10 within 120 seconds.
Speaking activation	Thirty trials with a ready speaker. Start at instructor approval; stop at the first audible speech from the speaker. Keep device and network conditions in the log.	At least 27 of 30 within 3 seconds.
One-way audio delay	Thirty non-speech timing trials. Compare the input signal and speaker output on a shared measurement timebase. Process calibration signals in memory; retain only numeric timings. Never substitute round-trip ping for audio delay.	95th percentile at most 150 ms. Report median and method. Unmeasured means unverified.
Audibility feedback	At least five willing reviewers hear a short question through the usual speaking method and through ClassMic. Alternate the order across reviewers. Ask the same comparison question on the form.	At least 75% rate easier audibility 4 or 5 out of 5. With five reviewers, at least four must be positive.
Control and recovery	Test permission denial, expired joining, two simultaneous requests, unapproved speech, release, mute, removal, timeout, disconnect and end session. Retest every repaired defect.	All Must checks pass. Zero unauthorized transmission, saved speech or open critical control defect.

Definitions and data handling

For 30 delay values, sort ascending and use the 29th value as the nearest-rank 95th percentile; the median is the average of values 15 and 16. Retain all attempts and report exclusions with reasons. Do not replace failed trials with extra successful ones.

Record anonymous reviewer codes, date, device/browser combination, conditions, timings, ratings and defect IDs. Collect no names, contact details, speech recordings or transcripts in the test record. Keep participant-level records until 30 days after course feedback, then delete them and retain aggregate counts and engineering conclusions. Participants can stop without affecting their course standing.

The 150 ms threshold is a selected prototype acceptance target, not a claim of measured performance or a universal classroom-audio standard. If it fails, report the failure and its effect on the recommendation.

Anonymous reviewer form

Reviewer code: _____ Date: _____ Test configuration: _____

Participation is optional. This short form asks about a prototype demonstration, not your identity. Please compare the same question heard through the usual speaking method and through ClassMic.

Question	Response
ClassMic made the question easier to hear than the usual method.	1 Strongly disagree 2 Disagree 3 Neutral 4 Agree 5 Strongly agree
The delay or echo disrupted the question.	1 Strongly disagree 2 Disagree 3 Neutral 4 Agree 5 Strongly agree
I understood how to request a turn and when the microphone was active.	1 Strongly disagree 2 Disagree 3 Neutral 4 Agree 5 Strongly agree
Could you participate through the intended route?	Yes / No / Used the alternative route
What made listening or speaking difficult?	_____ _____
What one change would help most?	_____ _____

Evaluation summary to complete after testing

Result	Recorded value
Setup successes / attempts	_____ / 10
Speaking-start successes / attempts	_____ / 30
Delay median / 95th percentile / method	_____ ms / _____ ms / _____
Positive audibility responses / valid responses	_____ / _____ = _____ %
Must checks passed / total checks	_____ / _____
Open critical defects	_____
Conclusion and important limitations	_____ _____

Complete these fields only from actual evidence. A small convenience sample supports a course evaluation; it does not establish campus-wide demand or effectiveness.
